

XAI_Visualization_Tool Architecture

- User
- trained DS Model with own data
 - Save model declaration as .pt
 - save activations as .pt

BE

- call `_get_model_info` & `get-acts-per-layer` to retrieve all relevant information
- OR use http Requests
- Send formatted and organized data to Frontend

FE

Neuronal Network XAI Visualization Tool

With the simple upload of your trained model and it's activations saved as .pt file
You can see the activations visually with histograms

To generate the activations you can use the following code:

```
acts = collect_activation(model_linear_correlated_data,model_linear_correlated_data_dict["x_train"])  
torch.save(acts, 'activations.pt')
```

upload model.pt

✓/✗ only .pt allowed

upload acts.pt

✓/✗ only .pt allowed

1.
